

Massachusetts's Oral Anticancer Treatment Access Law: What Clinicians Need to Know

Outdated coverage policies in Massachusetts USED TO limit cancer patients' access to life-saving drugs!

Traditionally, IV chemotherapy treatments are covered under a health plan's medical benefit where the patient is required to pay an office visit copay, usually between \$20 and \$30. Conversely, oral anticancer medications are covered under a health plan's prescription benefit and, many times, patients are responsible for extremely high and unmanageable copays, creating an enormous barrier for patients to access orally administered drugs. According to a recent study published in the Journal of Oncology Practice and American Journal of Managed Care, 10% of cancer patients failed to fill their initial prescriptions for oral anticancer medications due to high out-of-pocket costs.

Legislative Solution

In an effort to remove barriers to accessing life-saving treatments for cancer patients, Massachusetts implemented legislation, effective May 1, 2013, that directs individual or group health policies that provide coverage for cancer chemotherapy to extend coverage for prescribed, orally administered anticancer medications at a cost to the patient that is no less favorable than those receiving intravenously administered or injected cancer medications. Additionally, plans may not increase the out-of-pocket cost to patients to achieve compliance. **To view Massachusetts's oral parity law, please see next page.**

What Does This Mean for Patients?

If a patient is *privately insured (the law does not apply to Medicare)*, and their plan covers chemotherapy, an FDA-approved, orally administered drug should have the same out-of-pocket costs for the patient as an intravenously administered drug.
